

# Office

At an office workplace, there are multiple employees who work in different positions: Some of them are salespeople, some of them are office workers and there are group leads too.

- Every employee has a name, a unique identification number, a group name, and a monthly salary.
- Salaries are paid once every month. Each position is compensated differently:
  - Salespeople are making a commission between \$1500 and \$2000.
  - Office workers make \$1250 if they are a junior employee and \$1700 if they are a senior employee.
  - Group leads get a base salary of \$1800 plus the number of employees assigned to the same group times \$200.
  - There are office groups and sales groups, each with an assigned leader.
- Write a program that prints out the monthly salary for each employee for a year.
